

## Likes/Dislikes - May 8, 2020

Below are Evergreen Gavekal's Likes/Dislikes for May 8, 2020.

---

### OUR CURRENT LIKES AND DISLIKES

Changes highlighted in **bold**.

(Special note: for all stock-related recommendations, our current view is more cautious due to the extraordinary rally since late March.)

#### LIKE

- Large-cap growth (focus on lower P/E issues within this style; i.e., “growth at a reasonable price”)
- Some international developed markets, especially Japan
- Publicly-traded pipeline partnerships (MLPs and other mid-stream energy securities. Distribution cuts are spreading due to the unprecedented collapse in energy demand. After more than doubling off the recent low, some selling may be appropriate; however, excellent long-term total return potential remains.)
- Gold-mining stocks (both the miners and the bullion itself have rallied lately and could correct near-term; however, the future for them is very bright based on the trillions of fake money being created and unprecedented government spending)
- Gold (same as with miners)
- Silver (at current prices, it appears more attractive than gold)
- Select international blue chip oil stocks
- Short-term investment grade corporate bonds (1-4 year maturities)
- Emerging market (EM) bonds in local currency (focusing on stronger countries)
- Large-cap value
- Copper producers (the damaging effect of the coronavirus on Copper demand could be high in the short term, but the fundamentals of Copper supply/demand remain attractive long term. Copper could also have a very sharp rally if virus fears are calmed)
- High-dividend yield equities with *safe* distributions (as interest rates disappear, investors will go searching for yield)
- Most cyclical resource-based stocks (buy more carefully but considerable long-term upside remains as many of these are beneficiaries of inflation/pricing power due to supply chain disruptions)
- BB-rated corporate bonds (the Fed has now announced that it will buy high-yield—aka, junk--bonds, thus providing direct support to this asset class; it's a first for any global central bank and it intends, of course, to do this with fabricated money)
- A wide range of high-income securities, including preferred stocks (many of these have surged, as well, so buy less aggressively)
- Canadian REITs
- Intermediate & Long Term municipal bonds with strong credit ratings (both intermediate-term and long-term muni bonds have had big rallies with the Fed entering the market and we are less enthusiastic, as a result)
- South Korean Equities
- Long-term investment grade corporate bonds (the Fed's declared intention to buy

corporate bonds has made these much less appealing though some bargain remain)

- **Small-cap value (a recent pull-back has created a decent entry point)**
- Intermediate-term investment-grade corporate bonds, yielding approximately 4% (this is another corner of the bond market the Fed is actively supporting)
- Uranium & Uranium producers

## NEUTRAL

- **Solar Yield Cos (moving to neutral as a result of the powerful up-move since March)**
- Mid-cap value
- Emerging stock markets; however, a number of Asian developing markets look undervalued
- **US-based Real Estate Investment Trusts (REITs) (It is critical to be highly selective with this sector; fundamentals for many REITs are likely to be very challenged.)**
- Cash
- Long-term Treasury bonds
- Canadian dollar-denominated short-term bonds
- Lower-rated junk bonds
- Intermediate-term Treasury bonds
- One- to two-year Treasury notes
- Traditionally “safe” sectors such as Staples and Utilities

## DISLIKE

- European banks (these are ominously making new all-time lows)
- Investment-grade floating rate corporate bonds (reducing exposure as a result of the Fed's rapid rate cuts down to essentially zero)
- US dollar (The unprecedented size of the rescue package funded by debt is likely to put downward pressure on the dollar once this crisis passes)
- Many semi-conductor tech stocks which have surged in price over the last six months and generally trade at lofty prices despite falling earnings.
- Small-cap growth
- Mid-cap growth
- **Floating rate bank loans (the junk variety; spreading bankruptcies and a big price recovery push this asset class back down into the dislike category).**

\* Credit spreads are the difference between non-government bond interest rates and treasury yields.

(Note: based on the intense damage done to nearly all risk-assets lately, our negativity has eased even on the above “dislikes”)
